FULL STACK RESUME

Nicholas Carter

React, Angular, Node.js, C#, accessible web and mobile experiences, and end-to-end delivery

Sarasota, Florida · Open to senior/staff engineering roles and selected client work

nick@nickcarter.dev · GitHub · LinkedIn

Summary

I’m Nicholas Carter, a software engineer with 20+ years across web, mobile, and backend development. At AgileThought, I led a Deloitte Symphony team and built Bankers Surety’s platform end to end. At Mad Mobile, I owned VF Corp’s MPOS and Sysco’s inventory apps. My work now extends into data systems and AI infrastructure.

Professional experience

Verdict / Independent · Independent Engineer — AI Infrastructure & Data Systems

2023 – Present · Florida

Build AI developer infrastructure and data systems, plus Angular 17 front ends on client contracts (2024–2025).

Designed and shipped Verdict, a Python-first LLM control plane with TypeScript integrations, explicit eligibility checks, decision receipts, replay, and failover workflows.

Built CLI and API workflows for catalog qualification, routing, simulation, benchmarking, health probing, and compatibility checks.

AgileThought · Senior Consultant · Team Lead

Jan 2018 – Nov 2023 · Tampa / St. Petersburg, FL

Led one of 17 Deloitte Symphony teams and built Bankers Surety’s platform end to end, leading the client relationship as well as development.

Team lead on Deloitte’s Symphony platform and owner of its React component library across three major versions.

Built Bankers Surety’s platform end to end: C# services, Entity Framework, Angular UI, integrations, Azure, and pipelines.

Mad Mobile · Senior Software Developer, Team Lead

Jul 2016 – Jan 2018 · Tampa, FL

Owned VF Corp’s Concierge MPOS, deployed in Stabio, Switzerland, and Sysco’s inventory and chatbot ordering apps, leading teams of up to 10.

Owned VF Corp Concierge MPOS for brands including Vans, Timberland, and The North Face.

Owned Sysco’s inventory and chatbot ordering apps and other core-services clients on AWS with Terraform.

Blue Cross Blue Shield of Michigan · UI Lead · Senior Web Developer / Senior Web Designer

Oct 2013 – Jul 2016 · Detroit, MI

UI lead for Member Portal R2: responsive, WCAG-accessible healthcare UI on Java / Spring Boot services.

Built responsive interfaces and reusable front-end patterns with Backbone, jQuery, Adobe CQ/CMS, HTML5, and CSS3.

Partnered with UX, product, content, and engineering teams on WCAG accessibility, cross-browser support, and maintainability.

Compuware · Senior Software Developer

Mar 2013 – Jul 2013 · Detroit, MI (Contract)

Developed and supported GM infotainment software in a cross-platform environment.

Worked with HTML5, Angular, Node.js, WebSockets, and SOAP service integrations.

Supported QA and release tooling, defect triage, and cross-platform troubleshooting.

Wayne County • Motor City Interactive • Enlighten • Summit Sports · Earlier Engineering Roles

2006 – 2012 · Michigan

Built the foundation of my career across CMS, intranet and portal, e-commerce, and interactive web applications.

Developed applications with JavaScript, PHP/MySQL, reusable UI components, and server-side integrations.

Worked with enterprise content-management platforms and publishing workflows.

Selected public work

verdict-node · Request checks for Node.js apps

A TypeScript adapter for applying request checks in Express and Next.js. It moves checks to the outgoing HTTP boundary, rather than asking every caller to implement them separately.

Project status: Published as an alpha. The shared Python/TypeScript request contract is still being aligned; end-to-end enforcement is not complete.

TypeScript · Express · Next.js · Zod

Verdict · Autonomous development control plane

A goal goes in; a verified, independently reviewed, receipted change comes out. Verdict plans a DAG, admits models, runs parallel workers with same-node failover, verifies ownership and checks, runs an independent review, then writes a tamper-evident receipt.

Project status: Credential-free demo with injected worker faults and a reroute to another model, ending in a verified receipt. It uses fixtures, not live providers.

Python · control plane · receipts · failover

Prediction Market SDK · Keeping market data in sync

Market feeds need more than an open connection. I built typed Kalshi API workflows, reusable order-book state, and WebSocket subscription and reconnect handling so applications can work with the data instead of rebuilding the plumbing.

Project status: Kalshi signing, order workflows, and market-data handling are tested. Polymarket signing and live-order safeguards are still limited.

Python · AsyncIO · WebSockets · msgspec

Capabilities

Full-stack & mobile

JavaScript & TypeScript

React & React Native

Angular (1 through 17)

HTML & CSS

Responsive UI & WCAG

CMS & e-commerce

Backend & APIs

C#

Node.js, Express & Koa

FastAPI & AsyncIO

REST & GraphQL

WebSockets

Typed contracts & integrations

Platform & leadership

AWS, Azure & GCP

CI/CD, Jenkins & SonarQube gates

Solution architecture

Client & stakeholder collaboration

Code review & mentoring

Agile delivery & release support

Education

Lakeland High School, White Lake, MI

High School Diploma, General Studies · 2005
